

Daily dose:

Weight	Powder	Tablets
0-5 kg	2 gram	2 tablets
5-10 kg	3 gram	2-3 tablets
10-20 kg	4 gram	3-4 tablets
20-40 kg	5 gram	4 tablets
40-50 kg	6 gram	5 tablets
50-99 kg	7 gram	6 tablets

The dose may be halved when the animal has visually improved (3-6 weeks).

Dose

The dose can be halved when the animal has visually improved (3-6 weeks).

Dose for horses

Large horses (600-700 kg): 50 g daily. The daily dose can be reduced to 25 g after 3-4 weeks.

CombiCare

A NATURAL COMPLEMENTARY FEED FOR DOGS, CATS AND HORSES

Other animals

CombiCare may also be given to other animals, as the uptake is universal for almost all types of animals. The dose is the same as for dogs and cats.

How long time should CombiCare be given ?

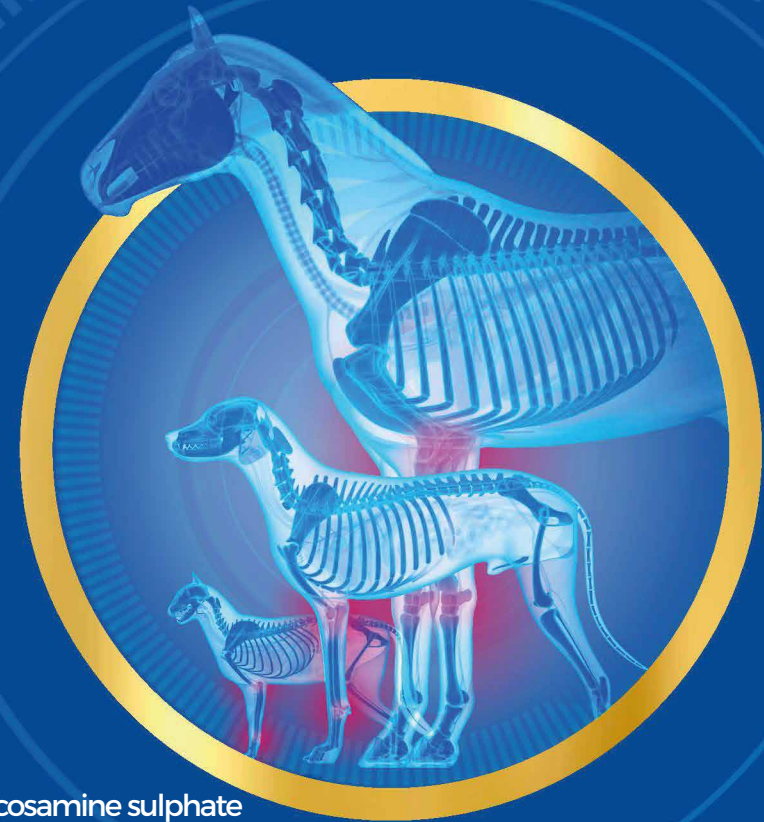

CombiCare can be given periodically until the animal's needs stabilize, however, older animals often require life-long supplementary treatment.

CombiCare is manufactured in Denmark by ChemVet dk, in an EU-approved facility. The raw materials found in CombiCare are high-quality ingredients and are feed-approved. These quality-control aspects are regularly checked and confirmed by regulatory agencies. The Glucosamine, Chondroitin and Collagen used in CombiCare are produced within the EU and are compliant with the relevant norms for human consumption regarding quality and purity.

- + Collagen type II
- + MSM (methylsulfonylmethane)
- + Boswellia extract
- + Manganese sulphate
- + Vitamin C
- + Algal calcium

CombiCare

A natural complementary feed for dogs, cats and horses. CombiCare should be given to animals with joint and motor system-related deficiencies.

As your house pet or horse gets older, trains or works hard, their mobility can deteriorate. This loss of mobility can be related to essential needs that are usually satisfied by their diet, which are not being met. To ensure that these deficiencies are met, CombiCare provides your animal with these tools.

Contents

CombiCare consists of motor system-related and joint-management ingredients necessary to animals.

Glucosamine and Chondroitin

Glucosamine and Chondroitin are essential macromolecular substances in cartilage and synovial fluid.

Collagen type II

Enzymatically treated Collagen type II, for maximal absorption. Collagen is an essential component in the macromolecular substances in cartilage and synovial fluid.

MSM

MSM is an organically-bound sulfur source with high availability.

Boswellia serrata

A tree found in India, whose sap has been used for centuries to treat joint pain. Contemporary research has confirmed that Boswellia's positive effects are related to the organic acids in these.

Manganese sulfate

Manganese sulfate plays an important role in the synthesis of proteoglycans and optimizes the use of the other substances. It enhances the effect of glucosamine.

Vitamin C

Vitamin C alone has a positive effect in joints, most likely related to its anti-oxidant qualities. It has a positive effect in low quantities in animal diets.

Algal calcium

Algal calcium in a naturally occurring source of biologically-active calcium, as well as trace elements and minerals.

Dosage

CombiCare is a natural complementary feed for dogs, cats and horses. CombiCare can be given to animals with joint related needs in order to maintain relevant motory functions. CombiCare comes in both powder and tablet forms.

Powder

The powder is sprinkled over food. The animal will usually consume CombiCare without any problems, but it can also be mixed with something tasty to the animal.

Tablets

The tablets are the same size as vitamin pills and can be given either as a treat or mixed in food. The tablets contain no sugar.

Packaging

CombiCare is available in both tablet and powder forms. The powder is available in 400 g and 1000 g cans. The tablets are available in packages of 180 and 360 pcs.

CombiCare contains:

- + Glucosamine sulphate
- + Chondroitin sulphate
- + Collagen type II
- + MSM (methylsulfonylmethane)
- + Boswellia extract
- + Manganese sulphate
- + Vitamin C
- + Algal calcium
