CalfPaste CONCEPT

An innovative nutritional management tool for the first critical period in the life of newborn calves and other young ruminants.

Complementary feed for calves and other ruminants, younger than 6 months.

The CalfPaste CONCEPT consists of variants of products:

RotaCalf PASTE

Complementary feed with a high content of dried egg yolk, from hens vaccinated against rotavirus, vegetable fat and vitamins.

RoCoCalf PASTE

Complementary feed with a high content of dried egg yolk, from hens, vaccinated against rotavirus, E. Coli and vegetable fat.

Background for the concept

One of the largest challenges in raising calves is early losses caused by mal-function in the digestion of the feed.

Further research has shown that dairy cows, which have had a suboptimal start in their life, are not capable of expressing their full genetic potential during the first lactation.

To have the best possible cows it is therefore important to give the calves the best possible start in their life. This includes optimizing management and nutrition.

CalfPaste CONCEPT has been developed to offer a nutritional tool to optimize on the nutrition in the early stages of the life of the calves and other ruminants.

RotaCalf PASTE is formulated as a palatable paste containing vegetable fat, dried egg yolk powder, *enterococcus facium*.

RoCoCalf PASTE is formulated as a palatable paste containing dried egg yolk and vegetable fat.

Dosage

Recommended dose is 10 ml per calf within the first 12 hours of life. For smaller ruminants the dose recommended is 2 ml per animal within the first 12 hours of life.

Storage

Store at temperature not exceeding 25°C, dry and in closed packing.

Packaging

Syringe	32 ml
Sales box	6 x 32 ml
Sales carton	6 x 6 x 32 ml
