RoCoCalf **PASTE**

An innovative nutritional management tool for the first critical period in the life of newborn calves and other young ruminants.

Complementary feed for calves and other ruminants younger than 6 months.

RoCoCalf **PASTE**

Complementary feed with a high content of dried egg yolk from hens which have specific antibodies against bovine rotavirus and E.coli, and vegetable fat.

Background

One of the single largest challenges in raising calves is early losses caused by malfunction in the digestion of the feed.

Further research has shown that dairy cows, which have had a suboptimal start in their life, are not capable of expressing their full genetic potential during the first lactation.

Therefore ChemVet developed a nutritional tool to optimize the nutrition in the early stages of the life of the calves and other ruminants.

RoCoCalf **PASTE** is a tasty, easily digestible paste containing dried egg yolk powder (with specific IgY antibodies against bovine rotavirus and E.coli) and vegetable fat.

Dosage

The recommended dose is 10 ml per calf per day for 3 days. For other young small ruminants, the dose is 1-2 ml per animal per day.

Storage

In a dry place at a temperature not exceeding 25°C, in a closed package.

Packaging

Applicator	32 ml
Sales packaging	6 x 32 ml
