What is **ZooLac[®] PROBIRD** used for?

- **ZooLac[®] PROBIRD** is a new complementary feed. **ZooLac[®] PROBIRD** is developed to help to preserve good health.
- **ZooLac[®] PROBIRD** supports a healthy crop and intestines during any stressful situation for birds, i.e. races, exhibitions, breeding, weaning and change in feed or convalescence.
- **ZooLac[®] PROBIRD** is a combination of ingredients that helps to support the gut flora during other treatment of diseases as well.
- The product contains vinasse from fermentation of *Lactobacillus*, fragments of yeast cell walls and purified extract of yeast cell walls.
- **ZooLac[®] PROBIRD** also contains electrolytes and easily accessible energy, which helps birds recover more rapidly from demanding or stressful events, which is especially important for racing carrier pigeons.

The main advantages of **ZooLac[®] PROBIRD**

- ✓ **ZooLac[®] PROBIRD** helps you to ensure and maintain the strong health of birds.
- ✓ It should be given to birds to achieve the strong and proper function of their intestines and crop.
- ✓ This is essential for you to have strong and healthy birds.

Statements from leading breeders

- ✓ The pigeons look great.
- ✓ Healthy pigeons, fewer problems.
- ✓ The young birds really grow quickly.
- ✓ No more runts as a result of health problems.
- ✓ Drier and better faeces.
- ✓ Very satisfied with ZooLac[®]. I used **ZooLac[®] PROBIRD** three times a week. My pigeons are healthy all year long, as you can see from my results.

Multicenter veterinary testing in 6 pigeon lofts, 2019.

Total tests of 2090 pigeons of various breeds, mainly carrier pigeons. All the flocks underwent identical vaccination. Except for deworming before the breeding season, all treatment and acidification of the drinking water was stopped. All the pigeons were constantly given **ZooLac[®] PROBIRD** in their drinking water.

Results

For the birds, an improvement became apparent during the course of 3-4 days from the beginning of the dosing. No medicine was necessary for the period of the dosing. The carrier pigeons recovered rapidly after long and demanding races and they were able to train again in 12-24 hours. No watery faeces appeared in any of the tested pigeons. During the use of the supplement, the breeding season was without any problems.
